

SUGGESTIONS TO MINIMISE TRAFFIC CONGESTION

The TRAFFIC congestion problem in my area
POSTCODE.....or
LOCATION.....

appears to be caused by one or more of the following
(tick all boxes that apply):

- Badly programmed or unintelligent traffic lights, such as those set on red for too long which don't respond to the amount or flow of traffic
- Poorly designed junction or road layout
- Lack of visibility or restricted view at a road junction
- Traffic blocking a junction where a yellow box might prevent this
- Traffic travelling too fast from the right – or both ways
- A roundabout or gyratory system with unnecessary traffic lights, where give way to the right rule might otherwise be applied
- Perceived need for a mini roundabout instead of a T junction
- Too many traffic lights along one stretch of road
- Badly parked vehicles on a major road, causing obstruction
- Other causes - PLEASE STATE HERE, including location (A road or B road nos etc):

My suggestions to improve this congestion problem: *(use more space for a picture or diagram if necessary):*

*** My Initials and SURNAME (please print).....**

*** Email address:.....**

✉ Please send completed form by email to mailbox@emmerson-hill.co.uk (use your initials and surname as a document title if using a scanned PDF) or you can request a Word version. Or send by post  (please use a stamp) to Emmerson Hill Associates PO Box 25 Fareham PO15 6BL

** Your name and email will not be disclosed to any 3rd party – it will only be used to communicate results back to you (after completion) of the anonymised survey, which will be copied to Local Authorities/Highways Agents and the DfT.*
